

Reacting to Attacks	Does the system support revoking access by limiting access to sensitive resources, even for normally legitimate users and uses if an attack is under way?				
	Does the system support restricting login in instances such as multiple failed login attempts?				
	Does the system support informing actors such as operators, other personnel, or cooperating systems when the system has detected an attack?				
Recovering from Attacks	Does the system support maintaining an audit trail to help trace the actions of, and to identify, an attacker?				
	Does the system guarantee the property of nonrepudiation, which guarantees that the sender of a message cannot later deny having sent the message and that the recipient cannot deny having received the message?
